

## ENVIRONMENTAL POLICY

The Directors of Plastribution Limited recognise that an effective Environmental policy is an important element of their overall business strategy.

In this respect the company operates in an efficient and environmentally responsible manner with the emphasis on continual improvement. Below are some of the steps we're taking:

**We provide and actively promote sustainable materials from renewable feedstocks, or that are designed to minimise impact on the environment.**

**We work with our internal departments, 3PLs, customers and suppliers to minimise waste and reduce toxic emissions.**

**We actively encourage recycling where possible.**

**We provide training to our staff and customers around environmental issues and sustainable innovations.**

**We are proud to be a part of Operation Clean Sweep, an initiative to reduce pellet loss to the environment.**

As distributors of prime quality plastic raw materials, we also work closely with our suppliers to ensure that the products sold by Plastribution, conform to the necessary standards of quality, and to the best of our knowledge, pose no major hazards or threats to the environment in their manufacture or use.

As part of this policy Plastribution continues to meet the requirements of Producer Responsibility Obligations (Packaging waste) (amendment) Regulations 1999 through membership of Valpak.
